

Automated Gunshot & Aggression Response System (AGARS) was developed to provide near instant notification to responding authorities of hostile acts in and around buildings.

AGARS detects gunshots and aggressive behavior by employing the latest in audio analytics and then transmitting video evidence, along with detailed site information, to first responders.

Automatic, timely notification of hostile acts is vital to public & private safety; that is why every facility should deploy AGARS.

AGARS

Designed for Life

- Far fewer lives are impacted and lost when first responders are empowered to engage violent subjects quickly and judiciously. FBI statistics prove that every second counts.
- AGARS saves critical time by automatically forwarding immediate evidence of potentially violent confrontations to pre-established emergency responders, including on-site security personnel, resource officers and law enforcement agencies.
- The system is straightforward in deployment and operation, yet state-of-the-art in performance. Combining benchmark audio analytics, video surveillance, physical and electronic security products into one unique emergency notification system, AGARS provides immediate pre and post evidence of potentially violent incidents at deployed sites.
- AGARS empowers forward thinking leaders to reduce the daily risk of active shooters and violent confrontations by providing immediate dispatch upon gunshot and/or aggressive activities.

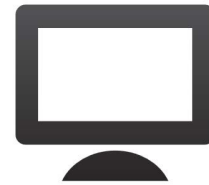

AGARS—A System of Systems

Impact-Resistant Film

Advanced IP Microphones with Analytics

Video Management System

Cellular-Managed Controller

Automated Gunshot & Aggression Response System

Working with AGARS is as easy as 1, 2, 3:

1. Learn more about AGARS from our website — www.GilbertsonGroup.com/AGARS
2. Contact TGG for specific inquiries and pricing — AGARS@GilbertsonGroup.com
3. Coordinate with TGG for initial system configuration and scheduling of your installation.
